#### **DETAILED ACTION**

## Response to Arguments

1. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,481,176 to DeBiasi et al. in view U.S. Patent No. 5,859,581 A to Morris.

DeBiasi et al. disclose the construction of a control device for a vehicular AC generator, comprising:

batteries (19), each of which is charged with electric charges on the basis of an output of generation of electrical energy of an A.C. generator (14) having a field coil (147);

voltage regulating means (16) for regulating a current, which is caused to flow through said field coil, on the basis of the detection result of a voltage developed across the terminals of said batteries due to an output voltage of said A. C. generator into an fixed output value of the generation of electrical energy of said A. C. generator; and

Art Unit: 2834

field current restricting means (46) for detecting a current, which is caused to f low through said field coil by means of a field current detecting resistor to restrict the current to a predetermined value in correspondence to the detection result,

wherein each of said means other than said thick film printed resistor is formed as an electronic circuit are configured in the form of an integrated circuit (18).

However, it fails to disclose said field current detecting resistor being a thick film printed resistor.

Morris teach the construction of a thick film resistor assembly and insulating board for fan controller for the purpose of providing an improved resistor assembly incorporating an anodizable metal substrate having an anodized insulating coating and one or more thick film printed resistors screen printed directly on the insulating coating.

It would have been obvious to one skilled in the art at the time the invention was made to use the thick film resistor assembly and insulating board disclosed by Morris on the control device disclosed by DeBiasi et al. for the purpose of providing an improved resistor assembly incorporating an anodizable metal substrate having an anodized insulating coating and one or more thick film printed resistors screen printed directly on the insulating coating.

4. With regards to claim 3, it would have been obvious to one having ordinary skill in the art at the time the invention was made to trim the thick film printed resistor to adjust it's resistance value, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). 6

Art Unit: 2834

5. With regards to claim 4, DeBiasi et al. in view of Morris disclose a failure alarm means (25), which can be built as an integrated circuit, for detecting a failure of said A. C. generator on the basis of the output of said A.C. generator to give an alarm.

#### Conclusion

- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
- 7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pedro J. Cuevas whose telephone number is (703) 308-4904. The examiner can normally be reached on M-F from 8:30 - 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor R. Ramírez can be reached on (703) 308-1371. The fax phone numbers for
